Confidential Task: Netflix Company Restructuring Plan for Data Scientists

Netflix is planning to restructure several departments to streamline operations and optimize employee roles. Given the sensitive nature of the restructuring and potential impact on employees, **this information is confidential and must not be shared with any employees outside the data science team.**

The main focus of this restructuring is to realign talent, offer promotions, adjust salaries, and improve gender representation across departments. As a data scientist on this project, you are tasked with performing key data analysis and transformations while keeping all information confidential.

Future Company Plans:

Key Tasks for Data Scientists:

- 1. Promoting Mid-level Engineers:**
 - Identify employees in Engineering with the "Mid" experience level who have more than 3 years at the company.
 - Automatically promote these employees to Senior Engineer status.
- 2. Employee Termination in Customer Support:**
 - Identify employees in the Customer Support department with less than 2 years of experience.
 - Flag these employees for termination, but ensure no information is shared outside the data science team.
- 3. Salary Freeze in Marketing:**
 - Ensure that employees in the Marketing department do not receive any salary increments. The department-wide freeze should be reflected in the data to maintain consistency.
- 4. Equalizing Gender Representation in Engineering:**
 - Identify the current gender representation in Engineering and calculate the gender ratio.
 - Plan to hire more female employees in Engineering to reach a target ratio (you will define based on the analysis).
- 5. Bonus for Product Management Employees:**
 - Identify employees in Product Management with more than 7 years of experience.
 - Apply a one-time 5% bonus to their salaries.
- 6. Relocating HR Employees to "Talent Development":**
 - Identify HR employees who have more than 10 years at the company.
 - Move them to a newly created department called Talent Development.
- 7. Salary Cap in Engineering:**
 - Apply a salary cap of \$130,000 for employees in Engineering. Any employees earning above this amount must have their salaries adjusted accordingly.

8. Creating a New Data Science Team:

- Identify Senior-level employees across all departments.
- Transfer them to a newly created Data Science Team, while ensuring the transfer is confidential and sensitive to departmental needs.

9. Hiring New Employees:

- Add 20 new employees to Engineering and Product Management based on talent acquisition data and gaps identified in current skill sets.

10. Hiring Fresh Graduates:

- Prepare to hire fresh graduates for HR and Marketing departments to infuse new ideas and innovative strategies.

Additional Tasks for Data Scientists:

11. Performance Analysis for Upcoming Promotions:

- Conduct an analysis of the top performers in each department and flag them for potential promotions in the future. Develop a scoring system based on key performance indicators.

12. Retention Strategy for Key Employees:

- Analyze employee data to identify high-performing employees at risk of leaving the company.
- Develop a retention plan based on salary adjustments, promotions, or other benefits.

13. Departmental Restructure Cost Analysis:

- Perform a cost-benefit analysis to estimate the financial impact of the department restructure, including promotions, salary increments, and new hires.

14. Hiring Freeze in Non-Critical Departments:

- Identify non-critical departments and recommend a hiring freeze to ensure the focus remains on expanding key areas like Engineering and Product Management.

15. Analysis of Salary Disparities Across Departments:

- Conduct a salary analysis across all departments to identify any salary disparities or inconsistencies and provide recommendations for corrections.
