

Retention Strategy for Key Employees

Scores vs Salaries Per Department

Explanation:

The scatterplots above show the distribution of Scores vs Salaries for each department. This helps in understanding the correlation between scores and salaries. Of course other factors affect the scores (like explained in the previous question) but for this question, we will be increasing salaries for employees with high scores that have relatively low salaries. This is because these employees are likely to leave the company (not being rewarded properly for their high

score).To do that, we need to specify a threshold for both the scores and the salaries. These scatterplots help with that.I chose both thresholds to be the 80th percentile in each department (as seen and explained in the code).Therefore, if an employee's score is higher than or equal to the score threshold AND their salary is less than or equal to the salary threshold,then a retention plan will be applied for them, which consists of a 15% increase in their salary.

Employee_ID	Name	Department	Score	Salary	Retention_Plan	Increased_Salary
62297	Kenneth Harrison	Customer Support	17	105953.0	Yes	121845.95
